PROGRAM FACT SHEET INFORMATION TECHNOLOGY/ USER INTERFACE & EXPERIENCE DESIGN (A25590I)

The Information Technology/User Interface and Experience Design (A25590I) curriculum prepares graduates

for employment in the application design and interactive arts industry. Course work includes user experience research, motion graphics, user interface design, web design, multimedia scripting, useability testing, and interactive technologies.

Graduates should qualify for employment as user interface designers, web designers, digital product managers, multimedia specialists, user experience researchers, and many new jobs yet to be defined in this expanding field.

The Information Technology (IT) curriculum prepares graduates for employment in the technology sector as designers, testers, support technicians, system administrators, developers, or programmers who use computer software and/or hardware to design, process, implement, and manage information systems in specialties such as database services, security, business intelligence, healthcare informatics and others depending on the technical path selected within this curriculum.

Course work includes development of a student's ability to create, store, communicate, exchange and use information to solve technical issues related to information support and services, interactive media, network systems, programming and software development, information security and other emerging technologies based on the selected area of study.

Graduates should qualify for employment in entry-level positions with businesses, educational systems, and governmental agencies which rely on computer systems to design and manage information. The program will incorporate the competencies of industry-recognized certification exams.
